CARDAMINE DIGITATA, Rich. in Frank. I. Journ., ed. 2
app. p. 26.

Near the mouth of the Mackenzie River, 1893. (*Rev. J. D. Stringer.*) Not rare between Lake Athabasca and Chesterfield Inlet. 1893. (*J. W. Tyrrell.*) Referred to *C. pratensis* by later American botanists. Easily separated from that species by its creeping, stoloniferous underground-stem, thinner, generally digitate leaves and smaller flowers. Not collected in America since first found by Richardson, but recorded from St. Lawrence Bay, Behring's Straits, by Chamisso and Eschscholtz. Fruiting specimens have never been collected.

LOBULARIA MARITIMA, Desv.

THELOPODIUM (?) SALSUGINEUM, Robinson, Syn. Fl. N.
Amer., p. 175.

Sisymbrium salsugineum, Pall.; Macoun, Cat. Can. Plants, Vol. I., p. 47.

By a saline lake, Park-beg, west of Moose Jaw, Assiniboia, June 23rd, 1896. (*John Macoun.* Herb. No.

14, 292).¹ This interesting little Crucifer has been rarely collected, and there is still some uncertainty as to its true place among the Cruciferae. It has already been referred to several genera, and Dr. Robinson has only doubtfully named it *Thelopodium*. He says: "The problematic *S. salsugineum*, Pall. with glabrous entire cordate-clasping leaves, purplish flowers and undivided stigma, may well be referred to *Thelopodium*, from which it appears to be distinguished only by its small size and slender habit." (Syn. Flora, p. 137). Its range in America, according to Dr. Robinson, is "Rocky Mountains from Colorado at South Park, *Porter*, to British America and shores of the Arctic Sea, *Richardson*, according to Hooker, l.c.," but it has never been found in our Rocky Mountains so far as we know.

CAPSELLA ELLIPTICA, C. A. Meyer.

ARENARIA MACROPHYLLA, Hook.

Dr. Robinson in Proc. Amer. Acad. of Arts and Sciences, Vol. XXIX., p. 290, gives as the range of this species "eastward to Isle St. Ignace, Lake Superior."

¹ Whenever herbarium numbers are given, they are the numbers under which specimens have been distributed from the herbarium of the Geological Survey of Canada.

Specimens collected in 1894 by Mr. A. P. Low at Lake Michikamow, Labrador, and in 1896 along the Koaksoak River, Northern Labrador, have been doubtfully referred here.

GERANIUM BICKNELLII, N. L. Britton, Bull. Torr. Bot. Club, Vol. 24, p. 92.

"Similar to *G. Carolinianum*, but taller, the stems usually more slender, loosely pubescent. Leaves slender-petioled, somewhat angulate in outline, the segments oblong or linear-oblong, mostly narrower; peduncles slender, two-flowered, the inflorescence loose; sepals lanceolate, awn-pointed; ovary lobes pubescent; persistent filaments longer than the carpels; beak about 1' line long, long-pointed, its tip 2"-3" long; seeds reticulated."

"Nova Scotia (?) Maine to Western Ontario and Southern New York."

In the February number of the Bulletin of the Torrey Botanical Club, Dr. Britton describes *G. Bicknellii* as one of "two undescribed eastern species." Our herbarium sheets of *G. Carolinianum* have long been separated

into two forms, both of general distribution from Ontario westward. Our herbarium specimens of *G. Bicknellii* give this plant a much wider range than is indicated by Dr. Britton. They are from Bedford, N.S.; Nepigon, Lake Superior; Killarney, Man.; Prince Albert, Saskatchewan; Banff, Rocky Mountains; Ainsworth, Kootanie Lake, B.C.; Spence's Bridge, B.C. (*John Macoun.*) Ottawa, Ont.; Observation Point, Lake Winnipeg. (*J. M. Macoun.*) North Shore of Lake Athabasca. (*J. W. Tyrrell.*) Arctic North America. (*Dr. Richardson.*) All the specimens from the above localities are separable at a glance from true *G. Carolinianum* by the much longer and very slender tip of the beak.

The specimens from Kootanie Lake were found growing with *G. Carolinianum* and were named var. *longipes*, Wat., a variety that must approach very closely *G. Bicknellii*.

GERANIUM CAROLINIANUM, L.
